

AeroTech ATX200 Aircraft Maintenance Manual

Chapter 3: Engine System Operational Limits and Maintenance Procedures

Table 3.1: Sensor Thresholds and Risk Assessment Matrix

1. Engine Vibration: Warning Threshold = 3.1 mm/s, Critical Threshold = 4.5 mm/s
 - If Engine Vibration > 3.1 mm/s: Monitor bearing assembly before next flight.
 - If Engine Vibration > 4.5 mm/s: Ground aircraft immediately and inspect.
2. Engine Temperature: Maximum Limit = 850 C
3. Exhaust Gas Temperature EGT: Maximum Limit = 750 C
4. Oil Temperature: Normal Range = 90 C - 105 C, High Warning = 110 C
5. Oil Pressure: Minimum Operating Limit = 35 psi
